

## Battery Goes Dead

---

Charge the battery using a motorcycle battery charger.

Remove the battery from the motorcycle before charging.

Do not use an automobile-type battery charger, as these can overheat a motorcycle battery and cause permanent damage. If the battery does not recover after recharging, contact your dealer.

### **NOTICE**

Jump starting using an automobile battery can damage your motorcycle's electrical system and is not recommended.

## Burned-out Light Bulb

---

All light bulbs on the motorcycle are LEDs. If there is an LED which is not turned on, see your dealer for servicing.
