

Battery Goes Dead

Charge the battery using a motorcycle battery charger.
Remove the battery from the vehicle before charging.

Do not use an automobile-type battery charger, as these can overheat a motorcycle battery and cause permanent damage.

If the battery does not recover after recharging, contact your dealer.

NOTICE

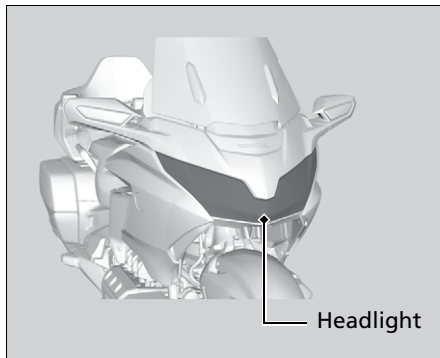

Jump starting using an automobile battery is not recommended, as this can damage your vehicle's electrical system.

Bump starting is also not recommended.

Burned-out Light Bulb

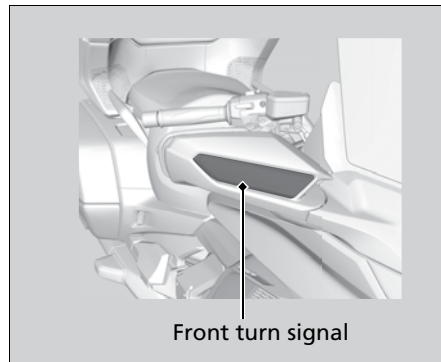

All light bulbs on the vehicle are LEDs.
If there is an LED which is not turned on, see your dealer for servicing.

Headlight

The headlight uses several LEDs.
If there is an LED which is not turned on, see your dealer for servicing.

Front Turn Signal

The front turn signals use several LEDs.
If there is an LED which is not turned on, see your dealer for servicing.
